SENIOR DOCUMENTATION ENGINEER | DEVELOPER DOCUMENTATION & AI-ASSISTED WORKFLOWS

PROFESSIONAL SUMMARY

Senior technical writer with 11 years of experience documenting APIs, SDKs, developer platforms, and workflows while also setting and implementing broad documentation strategy. Creates the documentation developers rely on to create and ship, and structures documentation with AI tooling in mind as well. Pairs strong fundamentals in documentation with content quality measures and AI-assisted tooling to elevate developer outcomes and broadly scale documentation.

RESEARCH

"How Many Tools Should an LLM Agent See? A Chance-Corrected Answer." NeurIPS 2026, under review, co-author ([arXiv:2605.24660](https://arxiv.org/abs/2605.24660)).

SKILLS

Technical Writing: Developer documentation, API/SDK documentation, information architecture, release notes, content strategy, editorial review, contributor workflows

AI & Knowledge Systems: Documentation architecture for AI/LLM consumption, markdown optimization, AI-assisted authoring, documentation knowledge graphs, retrieval evaluation, content quality measurement, structured context design

Developer Enablement: Technical education and training programs, self-produced instructional video, developer-feedback loops, contingent-writer leadership

EXPERIENCE

META - REALITY LABS | Remote

2022 - 2026

Senior Documentation Engineer - Content AI Docs Development Team

2026

Co-led the Content AI Docs development team: 5 cross-functional workstreams on a docs-as-code foundation, spanning retrieval evaluation, knowledge graphs, and AI-assisted authoring.

- Created and updated documentation for AI-agent consumption across primary documentation tracks via learning objectives, Markdown optimizations, and content validation.
- Cleared a 596-bug documentation backlog by defining, testing, and refining the agentic pipeline behind it, which produced both actionable JSON fix manifests and the production diffs that documentation engineers reviewed and shipped.
- Built and shipped AI-agent tool schemas, plugins, and hook configurations turning ad-hoc use of Muse Spark and other AI tools into governed, reliable workflows.

Tools & systems: Muse Spark, Claude Code, Python, TypeScript / JavaScript, Markdown

Horizon Worlds Creator Documentation Lead

2025 - 2026

Promoted into the documentation lead role for the Horizon Worlds Desktop Editor: owned the full left-nav information architecture and page set across a weekly release cycle (38 releases, 120+ weekly creators).

- Reduced draft creation time by an average of 1-2 working days by creating and shipping AI-agent-based tooling that supported 2 major feature launches.
- Created and standardized the Horizon Worlds release notes process to inform users on weekly feature launches, bugs, and known issues.
- Hired, onboarded, and led 2 contingent technical writers through major content releases and daily work including team coordination, work triaging, and priority escalations as necessary.
- Hand-authored 100+ documentation changes including 42+ tutorial overhauls across the Horizon docs ecosystem.
- Initiated the documentation-to-knowledge-graph partnership behind the in-editor Creator Assistant, establishing learning objectives as its foundation and validating the resulting graph of 300+ nodes; the shipped agent was announced on [Meta's developer blog](#) and independently covered by [UploadVR](#) and [Road to VR](#).

Tools & systems: AI-agent drafting tooling, TypeScript / JavaScript, internal CMS management, Markdown

Horizon Worlds NPC & GenAI Documentation Specialist

Owned the complete NPC and Generative AI documentation on the public Horizon Worlds Learn surface: ~23 articles spanning speech NPCs, TypeScript-based NPC scripting, and the generative creation tools.

- Documented the end-to-end NPC creation process including scripted behaviors, animation, navigation, and LLM-driven conversational AI.
- Created and maintained documentation for GenAI tools including script and audio creation, texture generation, meshes, and environment generation.
- Translated fast-moving AI features into practical creator guides to enable developer creation and support public launches.
- Partnered with product, design, and engineering stakeholders to clarify expected creator workflows, validate technical accuracy, and turn emerging AI capabilities into usable documentation patterns.
- Created a standardized documentation template for NPC tooling enabling the testing and documentation of features for a broad software feature overhaul.

Tools & systems: Llama-powered generative AI tools, TypeScript / JavaScript, Markdown

2024 – 2025

Platform SDK Documentation Engineer

Owned Platform SDK documentation for Meta Quest developer surfaces: SDK concepts, implementation guides, sample-backed tutorials, API references, and launch documentation across Unity, Unreal, and Native.

- Drove Platform SDK documentation updates for Connect 2024, leading simultaneous content, learning objectives, information architecture, and API-reference workstreams that all landed by the Connect 2024 timeline.
- Learned, structured, and documented the platform networked-services surface: 25+ platform features including a 17-page multiplayer suite covering session management, group presence, invite and deep-link flows, reconnection, VoIP party chat, cross-play, and server-to-server webhooks.
- Reached 100% Platform SDK API reference coverage across Unity, Unreal, and Native surfaces by establishing reference templates, review workflows, and structured update patterns.
- Built self-serve docs-as-code contribution workflows (Git-based, review-gated) enabling 200+ engineer-authored diffs while preserving documentation quality.
- Helped design an early AI-assisted documentation workflow that guided engineer-authored diffs, validated documentation structure, and generated learning-graph and knowledge-graph inputs.

Tools & systems: Multiplayer networking systems (session management, presence, VoIP, webhooks), Photon, Git, docs-as-code, Markdown

2022 – 2024

ADDITIONAL TECHNICAL WRITING EXPERIENCE

Technical Writer | Deposco | Alpharetta, GA

Created and maintained technical documentation for warehouse, supply-chain, and SaaS product workflows, partnering with product, support, and engineering stakeholders on procedures, release changes, and operational guidance.

Tools & systems: Warehouse ordering and forecasting software documentation, Help-site publishing, translation and localization sourcing

2021 – 2022

Technical Writer | Ionic Security | Atlanta, GA

Authored and maintained API/SDK documentation, procedures, training materials, and customer-facing guidance for enterprise data security products.

Tools & systems: MadCap Flare, Zendesk Knowledge Base, PDF, video production and editing

2017 – 2021

Earlier Technical Writing Experience

SunTrust; Mitsubishi Electric; SEDC | Atlanta, GA

Built an early foundation in technical communication, analytics, web content, and cross-functional stakeholder support while working in banking, HVAC, and utility data roles.

Tools & systems: MadCap Flare, Paligo, Oxygen XML, XML-based publishing

2015 – 2017

EDUCATION

Bachelor of Arts – Writing & Linguistics

Georgia Southern University – Statesboro

2014
