SENIOR DOCUMENTATION ENGINEER | AI DOCUMENTATION SYSTEMS, RETRIEVAL EVALUATION & KNOWLEDGE GRAPHS

PROFESSIONAL SUMMARY

Senior technical writer with 11 years in the field, specializing in API, SDK, and developer-platform documentation, the last four at Meta Reality Labs. Builds documentation architected for both human readers and AI consumers: AI-assisted authoring workflows, documentation knowledge graphs, retrieval evaluation, and content quality measurement.

RESEARCH

- **"How Many Tools Should an LLM Agent See? A Chance-Corrected Answer."** NeurIPS 2026 (Evaluation & Datasets), under review, co-author. Bits-over-Random (BoR) as evaluation metric and RL reward for adaptive tool-search depth; matches 50-tool coverage using 7 tools, tool-choice accuracy 93.1% vs 87.1%. ([arXiv](#)).

SKILLS

Documentation Engineering: Developer documentation, API/SDK documentation, information architecture, release notes at weekly cadence, content strategy, editorial review, contributor workflows

AI & Knowledge Systems: Documentation architecture for AI/LLM consumption, markdown optimization, AI-assisted authoring (Claude Code), documentation knowledge graphs, retrieval evaluation, content quality measurement, structured context design

Technical Platforms: Python, TypeScript / JavaScript, Markdown, XML (Paligo, Oxygen XML), JSON, Git, VS Code, MadCap Flare, Confluence, Jira, CMS schemas; reads SDK code across Unity, Unreal, and Native surfaces

EXPERIENCE

META - REALITY LABS | Remote

May 2022 - May 2026

Content AI Development Team

January 2026 - May 2026

- Co-led the Content AI Development team across 5 workstreams (AI-assisted authoring, content quality measurement, retrieval evaluation, documentation knowledge graphs, and procedural content generation) on a docs-as-code foundation, developing the tooling with Claude Code and internal AI tools.
- Structured documentation for AI and LLM consumption across three primary development tracks (Unity, Unreal, and Native) through learning objectives, knowledge-graph validation, JSON intermediates, and markdown optimization.
- Designed and shipped an engine-agnostic interactive diagram pipeline using Python, SVG, ImageMagick, and a custom CMS tag schema, producing typed clickable diagrams across 5 development engines.
- Helped define, test, and refine the prompting and LLM system design behind Writermate, an agentic documentation creation and repair workflow that turned doc bugs into JSON fix manifests and agent-drafted batch edits gated by SME spot checks, then applied it across Unity and Unreal doc sets at 75-83% accuracy on complex subject matter, including a 596-bug backlog fix in the Unity docs.
- Drove retrieval evaluation for the documentation AI stack: defined query sets and created golden datasets to measure whether AI-based workflows retrieved the correct documentation pages; co-authored an arXiv preprint (under review at NeurIPS 2026) introducing a chance-corrected metric for LLM agent tool retrieval.
- Built internal chatbots over the primary documentation tracks using golden datasets and SME input, layering per-chatbot knowledge graphs that powered node-based responses, diagram generation, and multimedia matched to a user's estimated subject familiarity; tested and value-graded responses for accuracy and clarity.
- Shipped AI-agent tool schemas, plugins, and hook configurations for the writing team, turning ad-hoc AI use into governed workflows: deterministic checks validated agent behavior, and context re-injection at set turn intervals cut token overhead.

Horizon Worlds Creator Documentation Lead

June 2025 – January 2026

- Documentation lead for the Horizon Worlds Desktop Editor, owning the full left-nav information architecture and page set across a weekly release cycle: 38 releases and 120+ weekly creators.
- Created and shipped PRD-to-docs tooling that reduced draft creation time by 1–2 working days and supported 2 major feature launches plus updates across 5 engineering teams.
- Established and standardized the Horizon Worlds release notes process, creating repeatable workflows for weekly launches, stakeholder review, and sustainable ownership transfer.
- Authored 100+ documentation diffs and 42+ targeted tutorial updates across Desktop Editor onboarding, NPC/GenAI tooling, mobile economy systems, and creator education content.
- Led contingent writers across the Horizon GA launch and follow-on feature work, directing 2 CWs and onboarding 1 new CW hire while coordinating page triage, technical review, timelines, and parallel documentation workstreams.
- Initiated the documentation-to-knowledge-graph partnership behind the in-editor Creator Assistant, establishing learning objectives as its foundation and validating the graph of 300+ nodes that powers it; the shipped agent was announced on [Meta's developer blog](#) and independently covered by [UploadVR](#) and [Road to VR](#).

Horizon Worlds NPC & GenAI Documentation Specialist

December 2024 – June 2025

- Owned the complete NPC and Generative AI tools documentation sections (~23 articles: 15 NPC, 8 Generative AI tools) on the public Horizon Worlds Learn surface, covering AI speech NPCs, NPC scripting, and the generative-AI creation tools (audio, texture, skybox, mesh, and environment generation).
- Partnered with product, design, and engineering stakeholders to clarify expected creator workflows, validate technical accuracy, and turn emerging AI capabilities into usable documentation patterns.
- Created a standardized documentation template for NPC tooling and partnered with NPC and GenAI teams to test emerging features, refine UI/documentation gaps, and prepare launch-ready creator guidance.

Platform SDK Documentation Engineer

May 2022 – December 2024

- Owned Platform SDK documentation for Meta Quest developer surfaces, including SDK concepts, implementation guides, sample-backed tutorials, API references, and launch documentation across Unity, Unreal, and Native.
- Drove Platform SDK documentation updates for Connect 2024, leading simultaneous content, learning objectives, information architecture, and API-reference workstreams that all landed by the Connect 2024 timeline.
- Reached 100% Platform SDK API reference coverage across Unity, Unreal, and Native surfaces by establishing reference templates, review workflows, and structured update patterns.
- Built self-serve docs-as-code contribution workflows (Git-based, review-gated) enabling 200+ engineer-authored diffs while preserving documentation quality.
- Helped design Bots4Docs, an early AI-assisted documentation workflow that guided engineer-authored diffs, validated documentation structure, and generated learning-graph and knowledge-graph inputs.

ADDITIONAL TECHNICAL WRITING EXPERIENCE

Technical Writer | Deposco | Alpharetta, GA

Aug 2021 – May 2022

- Created and maintained technical documentation for warehouse, supply-chain, and SaaS product workflows, partnering with product, support, and engineering stakeholders on procedures, release changes, and operational guidance.

Technical Writer | Ionic Data Security | Atlanta, GA

Nov 2017 – Jul 2021

- Authored and maintained API/SDK documentation, procedures, training materials, and customer-facing guidance for enterprise data security products using XML-based publishing workflows.

Earlier Technical Writing Experience

SunTrust; Mitsubishi Electric; SEDC | Atlanta, GA

Sep 2015 – Nov 2017

- Built an early foundation in technical communication, analytics, web content, and cross-functional stakeholder support while working in banking, HVAC, and utility data roles.

EDUCATION

Bachelor of Arts – Writing & Linguistics

2014

Georgia Southern University – Statesboro
